

Dear customer,

The Airtex Products commitment to the European market is based on offering products of “OE Matching Quality”. Therefore, our water pumps components, such as: bearings, seals, impellers, etc..., are part of a strict engineering process which guarantees that they are in accordance with the performance of the OE product.

This is the reason why we have also started a process to match the OE impeller technology. We have identified a select number of references which the impeller appears to look like plastic; it is actually made of reinforced PPS with 40% glass fibre (PPS-GF40).

Therefore, Airtex impellers match the OE impeller technology and guarantee the same OE performance.
